8 berries were collected at veraison (transition between stage II and stage III of berry growth) from field-grown vines 60 days after full bloom. Berries were still green but soft. Sampled vines were located at the University of California, Davis, experimental vineyard. CDNAs were made by oligo-dT priming and directionally cloned. 5'and 3' adaptors were used in cloning as follows: 5'-ANGCAGTGGTATCAACGCAGAGTGGCCATTACGGCCGGG-3' and 5'-ATTCTAGAGCCCGAGCGGCGACATG-GT (30) NN-3'. Library was constructed using the Clontech Creator SMART kit and size-selected to contain the 0.5-3 kb size fraction."

              Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
